## Abstract

*The construction of ecological civilization is a thousand years of sustainable development of the Chinese nation. Based on the practical needs, it is imperative to promote the construction of ecological civilization in China. We must be guided by the Marxist view of nature. To promote the construction of ecological civilization in contemporary China, we must innovate the theoretical research of ecological civilization construction and strengthen the consciousness and initiative of ecological civilization construction. Improve science and technology, change production practices; Improve the ecological civilization system, improve the management and supervision mechanism; We will raise our political position and coordinate ecological progress.*

## Keywords

*New era; Ecological civilization construction; Legal system; research.*

## 1. Rule of law governance requirements for ecological civilization construction in the New Era

At present, the concept that clean water and lush mountains are invaluable assets has been gradually established in the whole society and has been continuously and effectively practiced. We will strive to use ecological improvement to drive and serve the five-sphere integrated development, make reform more sustainable, stable and efficient, and firmly pursue a civilized development path of sustainable and green development[1]. (See Table 1)

### 1.1. Summary and innovation of ecological governance theories at home and abroad

The legal governance of ecological civilization is the product of the combination of ecological theory and ecological governance practice. Therefore, it can be seen that the choice of the road of ecological rule of law is not only the summary and innovation of the historical experience of ecological governance and restoration in ancient and modern times, but also the realistic choice and inevitable path of ecological governance in the new era[2].

### 1.2. Organic unity of ecological governance practice and ecological theory

Ecological degradation is still serious, awareness of environmental protection is still weak in some places, and the ability and methods of ecological and environmental governance are lack of rule of law.

Table 1 Rule of law governance requirements for ecological civilization construction in the new era

Serial number	Building an ecological civilization in the new era requires the rule of law
1	Summary and innovation of ecological governance theory at home and abroad
2	The organic unity of ecological governance practice and ecological theory

## 2. The necessity of promoting ecological civilization construction in the new era

China has built an ecological civilization construction system with the goal of realizing a beautiful China, the concept of harmonious coexistence between man and nature as the strategy, and the battle of environmental protection as the leading role. This system highlights the distinctive characteristics of The Times, and is a fundamental measure to address the current social, economic and cultural needs of the ecological environment and the prominent contradiction between the needs of the people[3]. (See Table 2)

### 2.1. Meet the needs of economic structural transformation

The high consumption of rare resources leads to the decrease of ecological environment carrying capacity year by year. Therefore, we should abandon the misconception that development comes first and governance comes second, change the structure of economic development at its root, and make ecological progress more effective. At the same time, it is necessary to establish the idea of "environmental protection and economic development together" and adhere to the principle of ecological sustainability, so as to meet the needs of economic structural transformation.

### 2.2. Meet the people's needs for a better life

Only by vigorously promoting ecological civilization and taking the road of green, low-carbon, energy saving and environmental protection can we meet people's ever-growing demands for a better life and achieve a harmonious coexistence between man and nature. There is no substitute for the ecological environment. Only by taking the harmonious coexistence between man and nature as the fundamental policy can we guarantee the ecological resources and ecological rights and interests of future generations, so as to maintain the ecological justice between generations[4].

### 2.3. Help realize the Chinese Dream of national rejuvenation

To realize the Chinese dream of the great renewal of the Chinese nation, we must adapt to The Times and draw a blueprint for ecological progress with Chinese characteristics. Therefore, we should constantly grasp the new trend of world development, proceed from the overall perspective, promote the construction of ecological civilization, in order to enrich the advanced thought of socialism with Chinese characteristics, and highlight the superiority and driving force of the socialist system.

Table 2 Necessity of promoting ecological civilization construction in the new era

Serial number	The necessity of promoting ecological civilization construction in the new era
1	To meet the needs of economic structural transformation

2	To meet the people's needs for a better life
3	To help realize the Chinese Dream of national renewal

### 3. Ways to promote ecological civilization in the new Era

Development is a path that connects the present and the future. How to get there depends on people's understanding and reflection. Marxist view of nature has distinct characteristics of times and development, which is the unity of theory and practice. Its purpose is to say that these unhappy situations are not accidental, but to provide scientific methodology guidance for solving the ecological problems encountered by human beings. (See Table 3)

#### 3.1. Improve science and technology, change production practices

Scientific and technological innovation should create conditions for people to live a better life, rather than become a tool for people to pursue interests, ignore people's pursuit of happiness, production for production's sake and efficiency for efficiency's sake. We should improve science and technology, give full play to the role of science and technology in conserving resources and protecting the environment, change production practices, promote green development, and inject green genes into production and development.[5]

#### 3.2. Improve the ecological civilization system and the management and supervision mechanism

The introduction of ecological civilization system is to meet the needs of human development, to solve the outstanding problems of mankind. At present, to push forward the ecological civilization system smoothly and produce remarkable results, it needs continuous efforts from all aspects. It is necessary to establish and improve the ecological civilization system, to form an inertial steady-state system of management mode, management organization setting and management system, and to internalize the completed top-level design ecological civilization system into the mainstream system and mechanism.

#### 3.3. Raise the political position and coordinate the construction of ecological civilization

The formation of the thought of ecological civilization is the product of The Times, but also the green feelings of the people. The positive interaction between the top-level design of ecological civilization construction and the grassroots cannot be separated from the active participation and cooperation of the people to penetrate every link of ecological construction into the daily life of the people, so that everyone does not feel that the ecological construction activities are a kind of responsibility, but a kind of enjoyment, in the joint efforts to build a new modern pattern of harmonious development of man and nature.

Table 3 The path of ecological civilization construction in the new era

Serial number	The path to ecological progress in the new era
1	Improve science and technology, change the way of production practice
2	We will improve the system for promoting ecological progress and the management and oversight mechanism
3	We will raise our political position and coordinate ecological progress

#### 4. Conclusion

By establishing big data on ecological and environmental protection and promoting the exchange of information on ecological and environmental protection, various regions in the country can cooperate in ecological culture, environmental protection industry, green technology and ecological governance. Advocating the establishment of ecological resource protection mechanism, drawing lessons from each other, providing green technological support, strengthening scientific and technological innovation, establishing green technological innovation system, and promoting the green economic development in our country.
